

Climate Change And Girls' Education

Fact

Women also tend to be significantly affected, adding to the negative effects on children, as they are less likely to receive adequate nutrition or care.

Families whose lives are attached to the sea mostly depend on climate, weather and nature. In which, poor, low-income women and disadvantaged women are the ones who are severely affected by natural disasters.

Main challenges

- Many girls and women have to find water sources far from where they live to serve their daily activities
- These effects restrict girls from going to school, reducing educational opportunities and increasing gender inequality
- For families displaced by climate emergencies, girls and women may be harassed in shelters and refuges.
- Climate change can cause infectious diseases that directly affect health and prolong poverty.

The number of people displaced by climate change are women

Recommendations

- Regardless of gender, everyone has a role to play in fighting climate change
- Integrating gender dimensions into disaster, climate and environmental risk reduction policies and programs
- Promote women's participation and leadership, including ensuring full, equal and meaningful participation and leadership of women at all levels of management on climate change and the environment and disaster risk reduction.
- Community education is key to raising awareness about climate change and gender equality today
